Anti plagiarism

"La Granja, The Life Science Journal" in its efforts to maintain the novelty and originality, just implement an anti-plagiarism software that can recognize non-original documents, indicating the source. In order to this, different special services are used, such as the Urkund system, which analyzes texts for grammatical and ortho-typographical matches, ensuring the works are unpublished and in compliance with the quality standards of the editorial board guaranteeing the own scientific production.

Besides, "La Granja, the Life Science Journal" offers to the authors and reviewers, as well as the scientific community, a set of specific tools in the detection of plagiarism: Grammarly, Plagium, Copionic, WriteCheck, PaperRater, Plagarisma.net, Viper Plagarism Scanner or CrossCheck. It is a set of free and open access systems, which supervise the originality of any manuscript and allow to control the plagiarism.
